## ACADEMIC RECORD

---

### Howard University, Washington, DC

January 2016 – present

- **Ph.D. Computer Science (Exp. 5/2019)**
- **Concentration:** Automotive Systems Security
- **Advisor:** Dr. Gedare Bloom

GPA: 3.69

### California State Polytechnic University, Pomona:

January 2013 – Dec. 2014

- **Master of Science in Electrical Engineering:** Computer Systems Emphasis

GPA: 3.53

### Fountain University Osogbo, Nigeria

January 2008 – July 2011

- **Bachelor of Science in Computer Science**

GPA: 3.89

## RESEARCH INTEREST

---

Automotive Cybersecurity, Embedded System Security, Security in IoT, and Sensor Data Provenance.

## WORK EXPERIENCE

---

### Embedded System and Security Lab, Howard University, Washington, DC

#### Graduate Research Assistant/Project Lead

January 2016 – present

- **CARS - "Cars Assuring Resilient Security"**  
Involved in research that explores the security issues arising out of the growing use of electrical components that creates access points to vehicular distributed systems, that a potential hacker can exploit. Inherent security challenges such as distributed denial of service attacks, impersonation and fuzzy attacks are investigated to:
  - Establish theoretical foundations of fail-operational intrusion detection systems (FO-IDS),
  - Explore design space in the context of defending against attacks in automotive in-vehicle networks
  - Devise response and recovery protocols to ensure resilient operation, and
  - Evaluate the performance of the FO-IDS using actual vehicular test beds and data.
- **Security and Data Provenance in Internet of Things (IoT)**
  - This project is aimed at developing a framework that can be used to securely collect data provenance on memory constrained embedded systems device.
  - Developed a processor support and a board support package (BSP) for the ARM CortexM4F microcontrollers on RTEMS Real Time Operating Systems (RTOS).

### Oak Ridge National Lab: Research Intern

June 2017 – Aug. 2017

In-vehicle network security research and development for the in-vehicle network (CAN bus) to:

- Detect when an attack is imminent or when there are anomalous events occur on the bus.
- Investigates on ways to mitigate such anomalies and attack as they occur.
- Demonstrates message injection attacks on real vehicles to take control of critical functions

### IBM Research Lab, Almaden: Research Intern

June 2016 – Aug. 2016

Developed a data provenance model for the Internet of Things (IoT) systems enabling:

- The verification of systems correctness, integrity, and transparency of information shared across IoT platform.
- Providing mechanisms to ensure secure code and data provenance management on IoT platform.
- Investigate how provenance graphs can be used to detect anomalies in shared information on the IoT platform.

### Infoway Solution: Quality Assurance Engineer

June 2015 – Dec. 2015

- Responsible for testing data transmission website. This includes end to end validation of customer connectivity, data validation between users and the application
- Reviewed Business Requirement documents (BRD) and Functional Specifications Documents (FSD) to prepare Test Cases and identify test scenario

- Designed, executed and maintained Automation Test Script in Selenium WEBDRIVER using JAVA Framework – JUNIT, TestNG for regression test cases

#### **Cal Poly Pomona ECE Dept.: Graduate Research Assistant**

**August 2013 – Dec. 2014**

- Worked on project involving creating a Smart Monitoring and Response Tool “SMART” to enable real-time energy management of a DC-based distributed micro grid.
- Studied concepts such as moving target defense, message authentication codes and AES encryption
- Created an Android application that provides a way to help people share rides and carpool that implements RSA encryption messages

#### **Synaptics: HISD Project Management Intern**

**June 2014 – September 2014**

- Provide DFT (Design for Test) feedback to design hardware and firmware team
- Design and document electrical/electronic aspects of functional test systems.
- Create test specification to ensure appropriate product test coverage.
- Work with mechanical engineering and 3rd party system builders to build mechanical fixturing and enclosures.
- Manage and report on test development project deliverables including schedule and cost.
- Create, manage and maintained the system BOMs for projects in Agile

#### **Etisalat Nigeria (EMTS): Analyst, IT Service Desk and Incident Management    December 2011 – January 2013**

- Served as a member of the project team that designed and delivered the SAP-e-procurement (Supplier Relationship Management, Contract Lifecycle Management, Spend Performance Management, and Master Data)
- Served as a member of O2D project team, developing strategies to ensure compliance with new industry standards for electronic exchange.
- Providing first and second level support in the event of incidents/downtimes to application and hardware.
- Design, implement, and manage network server software and hardware.

#### **TEACHING EXPERIENCE**

- **Howard University, Washington, DC**
  - Instructor Math I Laboratory Spring '18
  - Teaching Assistant for Operating Systems Concept Fall '16, Spring '17
  - Teaching Assistant for Computer Organization I, II Fall '17, Spring '16, '17
  - Teaching Assistant for Modelling and Simulation Fall '16
- **California State Polytechnic University, Pomona**
  - Teaching Assistant for Electromagnetic Fields Spring '14
  - Teaching Assistant for Software Engineering Winter '14

#### **AWARDS, HONORS AND PROFESSIONAL AFFILIATIONS**

- Real-Time System Symposium Travel Award, \$600, 2018
- Trans-Atlantic Symposium on Technology and Policy Travel Award, \$1500, 2017
- CPS Week Student Travel Award, \$800, Carnegie Melon University 2017
- IEEE Security Development Conference Travel Award, 2016
- Chancellor's Prize - Best Graduating Student in the University, Fountain University, 2011
- College Prize - Best Graduating Student in Sciences, Fountain University, 2011
- Fountain University Scholar Award, in recognition of excellence in academic performance, 2008 - 2011
- Student Member, Institute of Electrical and Electronic Engineers (IEEE)
- Student Member, Association for Computing Machinery (ACM)
- Member of National Society of Black Engineers (NSBE)

## PUBLICATIONS

---

- **Conference and Workshop Articles**

- Olufowobi, Habeeb, Young, Clinton, Zambreno, Joseph, and Bloom, Gedare "WiP: Real-Time Modeling for Intrusion Detection in Automotive Controller Area Network." *Real-Time Systems Symposium (RTSS), 2018 IEEE*. IEEE, 2018.

## PROFESSIONAL DEVELOPMENT

---

- Participant, SAE CyberAuto Challenge, Detroit MI, July 2018
- Participant, CyberTruck Challenge, Warren, MI, June 2018
- Attendee, IEEE Real-Time Systems Symposium (RTSS) Nashville, TN, Dec.2018
- Attendee, IEEE Real-Time and Embedded Technology and Applications Symposium (RTAS), Pittsburgh, PA, April 2017.
- Attendee, PICASSO Trans-Atlantic Symposium on Technology and Policy for a Smart Society, Minneapolis MN, June 2017
- Attendee, IEEE Secure Development (SecDev) Cambridge, MA, Nov. 2016

## RELATED PROJECTS

---

### Google Summer of Code (GSoc 2016): RTEMS Port to ARM Cortex-M4F core-based MCUs

- The objective of this project was to add processor support and a board support package (BSP) for the ARM Cortex-M4F microcontrollers on RTEMS. I ported RTEMS to ARM Cortex-M4F and provide a board support package for TI TM4C129E. TM4C129E is a low cost, simple IoT demonstrator with high-performance onboard emulation.

### Performance analysis of GPUs on Matrix Scientific applications using OpenACC programming model (C++, OpenACC)

- The project evaluates the applicability of OpenACC, OpenCL directive and programming model designed to manage data or program transfer between the host and accelerator and provide an analysis of the performance tuning mechanism used in tuning OpenACC parameters to adapt to the execution environment on a given system.

### Design and implement a static analysis tool using Crystal Framework (Java)

- Implement a constant propagation program to notify users if they use loop statement where expression being evaluated is constant. Also, wrote multiple tests with respect to each quality assurance technique.

## TECHNICAL PROFICIENCIES

---

- **Programming Languages:** Python, Java, C++, C, VB, MATLAB, HTML, XML, CUDA, OpenCL, CSS, SQL, .NET Framework, VERILOG HDL, Assembly language (8085, MIPS).
- **Tools:** WebDriver, ANT, Oracle ERP, Agile, MS Exchange Server, CRM, Selenium, GIT, SOAP UI, TestNG, Active Directory, SolarWinds, Service Desk Plus.
